Chapter 1 Introduction

1.1 Welcome

The Wireless Network Adapter is a powerful 32-bit Cardbus/PCI/USB Adapter that installs quickly and easily into PCs. The Adapter can be used in Ad-Hoc mode to connect directly with other cards for peer-to-peer file sharing or in Infrastructure mode to connect with a wireless access point or router for access to the Internet in your office or home network.

The Wireless Cardbus/PCI/USB Adapter connects you with 802.11g networks at up to an incredible 54Mbps! And for added versatility, it can also interoperate with all the up to 11Mbps 802.11b products found in homes, businesses, and public wireless hotspots around the country. And in either mode, your wireless communications are protected by industrial-strength WPA, so your data stays secure.

1.2 About This Guide

This User Manual contains information on how to install and configure your Wireless Adapter to get your network started accessing the Internet. It will guide you through the correct configuration steps to get your device up and running.

Note and Caution in this manual are highlighted with graphics as below to indicate important information.

Contains related information corresponds to a topic.

Necessary steps, actions or messages should not be ignored.

1.3 Copyright statement

No part of this publication may be reproduced, stored in a retrieval system, or transmitted in any form or by any means, whether electronic, mechanical, photocopying, recording, or otherwise without the prior writing of the publisher.

1.4 Contents of Package

- Wireless network RNX-G200/RNX-G300(E)/RNX-G100 adapter
- Manual, Drivers and Utility on CD
- Quick Installation Guide

If any of the above items are missing, please contact your reseller.

1.5 Before you begin

You must have at least the following:

- A laptop computer/desktop PC with an available 32-bit Cardbus/PCI/USB slot
- At least a 300MHz processor and 32MB of memory
- Windows 98SE, ME, 2000, XP, Vista

- A CD-ROM Drive
- Cardbus/PCI/USB controller properly installed and working in the laptop computer
- A 802.11g or 802.11b Access Point (for infrastructure Mode) or another 802.11g or 802.11b wireless adapter (for Ad-Hoc; Peer-to-Peer networking mode.)

Chapter 2 Designing Your Wireless Network

The wireless Cardbus/PCI/USB Adapter supports up to 54 Mbps connections. This card is fully compliant with the specifications defined in IEEE802.11g standard. It is designed to complement PCI Local Bus computers and supports Windows 98SE/Me/2000/XP/Vista.

2.1 Cardbus adapter- RNX-G200

Figure 2-1

The two status LED indicators of the Cardbus wireless adapter are described in the following.

- PWR ON (Green): Indicates the Adapter is ready
- Lnk/Act ON (Green): Indicates a valid connection
- Lnk/Act Flashing: Indicates the Adapter is transmitting or receiving data.

2.2 PCI adapter- RNX-G300(E)

The status LED indicators of the PCI wireless adapter are described in the following.

- Lnk/Act ON (Green): Indicates a valid connection
- Lnk/Act Flashing: Indicates the Adapter is transmitting or receiving data. •

2.3 USB adapter- RNX-G100

The status LED indicators of the USB wireless adapter are described in the following.

- Lnk/Act ON (Green): Indicates a valid connection
- Lnk/Act Flashing: Indicates the Adapter is transmitting or receiving data.

Figure 2-3

Chapter 3 Install Wireless Adapter

3.1 Install Driver and Utility

- Insert the Driver and Utility CD-ROM into the CD-ROM driver.
- The Wizard should run automatically, and Figure 2-1 should appear. If it dose not, click the Start button and choose Run. In the field that appears, enter D:\autorun.exe (if 'D' is the letter of your CD-ROM drive).

• Click Install Driver & Utility on the Wireless Client Configuration Utility screen.

Figure 2-2

Follow the Install Shield Wizard steps, and click **Finish** when done.

Wireless USB utility ¥1.01 - In	nstallShield Wizard
	InstallShield Wizard Complete The InstallShield Wizard has successfully installed Wireless USB utility V1.01. Click Finish to exit the wizard.
	< Back Finish Cancel

Figure 2-3

• Now turn off your PC or notebook

3.2 Install Adapter

3.2.1 Cardbus Adapter- RNX-G200

- Power on your notebook, let the operating system boot up completely, and log in as needed.
- Hold the adapter with the LOGO facing up and insert it into a Cardbus slot.

Figure 3-1

• If the Found New Hardware Wizard displays, choose **Install the software automatically** (**Recommended**), and click **Next** button. The driver will be installed automatically.

Figure 3-2

3.2 .2 PCI Adapter- RNX-G300(E)

- Open your PC case and locate an available PCI on the motherboard.
- Slide the PCI Adapter into the PCI slot. Make sure that all of its pins are touching the slot's contacts. You may have to apply a bit of pressure to slide the adapter all the way in. after the adapter is firmly in place, secure its fastening tab to your PC's chassis with a mounting

screw. Then close your PC.

- Attach the external antenna to the adapter's antenna port.
- Power on the PC.

Figure 3-3

• If the Found New Hardware Wizard displays, choose **install the software automatically** (**Recommended**), and click **Next** button. The driver will be installed automatically.

3.2.3 USB Adapter - RNX-G100

- Power on your PC, let the operating system boot up completely, and log in as needed.
- Hold the adapter and insert it into a USB slot.
- If the Found New Hardware Wizard displays, choose **install the software automatically** (**Recommended**), and click **Next** button. The driver will be installed automatically.

Figure 3-4

You have now completed the driver and hardware installation for the Adapter.

3.3 Configuration your wireless adapter

• The Wireless Client Configuration Utility screen will appear automatically.

reless Client Conf	iguration Utility

• To connect to one of the networks on the list, select the wireless network, and click **Associate** button.

Chapter 4 Using the Wireless Client Configuration Utility

Use the Wireless Client Configuration Utility to check the link information, search for available wireless networks, or create profiles that hold different configuration settings. You can double-click the icon on your system desktop start it. Another way to start the Configuration Utility is to click on Start>Programs>Wireless Client Configuration Utility>WirelessCfg. If you are using Windows XP, you can use either the Zero Configuration Utility or the Wireless Client Configuration

4.1 Network Status

The Network Status tab displays signal strength and link information, Internet Protocol (TCP/IP).

Figure 4-1

Link Information

Status: The status of the wireless network connection.

- Network SSID: The unique name of the wireless network.
- Network Type: The mode of the wireless network currently in use.
- Network BSSID: The MAC address of the wireless network's access point.
- Security: The status of the encryption security feature.
- Link Speed: The data transfer rate of the current connection.
- Channel: The channel to which the wireless network devices are set.

Internet Protocol (TCP/IP)

- DHCP Option: The status of the DHCP client.
- IP Address: The IP Address of the Adapter.
- Subnet Mask: The Subnet Mask of the Adapter.
- Default Gateway: The Default Gateway address of the Adapter.

4.2 Site Survey

The Site Survey tab, displays a list of infrastructure and ad-hoc networks available for connection.

< <u>B</u> acl	< Finish Cancel

Figure 4-12

The Complete Screen will appear. Click Finish button. You have successfully created a connection profile.

Chapter 5 Troubleshooting

This chapter provides solutions to problems that may occur during the installation and operation of the Wireless Cardbus/PCI/USB Adapter. Read the descriptions below to solve your problems.

1. The Wireless Cardbus/PCI/USB Adapter does not work properly.

Reinsert the Wireless Cardbus/PCI/USB Adapter into your PC's PCI slot/Cardbus slot/USB slot.

Right click on My Computer and select Properties. Select the device manager and click on the Network Adapter. You will find the Adapter if it is installed successfully. If you see the yellow exclamation mark, the resources are conflicting. You will see the status of the Adapter. If there is a yellow question mark, please check the following:

Make sure that your PC has a free IRQ (Interrupt ReQuest, a hardware interrupt on a PC.)

Make sure that you have inserted the right adapter and installed the proper driver. If the Adapter does not function after attempting the above steps, remove the adapter and do the following:

Uninstall the driver software from your PC.

Restart your PC and repeat the hardware and software installation as specified in this User Guide.

2. I cannot communicate with the other computers linked via Ethernet in the Infrastructure configuration.

Make sure that the PC to which the Adapter is associated is powered on.

Make sure that your Adapter is configured on the same channel and with the same security options as with the other computers in the Infrastructure configuration.

3. What should I do when the computer with the Adapter installed is unable to connect to the wireless network and/or the Internet?

Check that the LED indicators for the broadband modem are indicating normal activity. If not, there may be a problem with the broadband connection.

Check that the LED indicators on the wireless router are functioning properly. If not, check that the AC power and Ethernet cables are firmly connected.

Check that the IP address, subnet mask, gateway, and DNS settings are correctly entered for the network.

In Infrastructure mode, make sure the same Service Set Identifier (SSID) is specified on the settings for the wireless clients and access points.

In Ad-Hoc mode, both wireless clients will need to have the same SSID. Please note that it might be necessary to set up one client to establish a BSS (Basic Service Set) and wait briefly before setting up other clients. This prevents several clients from trying to establish a BSS at the same time, which can result in multiple singular BSSs being established, rather than a single BSS with multiple clients associated to it.

Check that the Network Connection for the wireless client is configured properly.

If Security is enabled, make sure that the correct encryption keys are entered on both the Adapter and the access point.

APPENDIX A Specifications

Standards:	IEEE 802.11g, IEEE 802.11b
